

Amine Boularbah

Senior Mobile Engineer

Professional Summary

Senior Mobile Engineer with 6+ years of experience building scalable, high-performance mobile apps. Currently leading a team of 5 engineers on the architectural rebuild of the 433 football app, serving 77M+ fans, owning Clean Architecture design, a modular monorepo setup, and CI/CD automation. Deep expertise in Flutter, Dart, and state management with BLoC. Also build and ship my own products end to end. Passionate about robust, user-first apps that scale.

Employment History

Lead Mobile Engineer at 433, Remote (EU-Based)

Sept 2025 — Present

- Leading a team of 5 engineers on the full rebuild of the official 433 mobile app, serving a global community of 77M+ football fans
- Architected the complete application from zero using Clean Architecture, a multi-modular monorepo, and scalable state management, now the foundation for all mobile development at 433
- Own all technical decisions including testing strategy, CI/CD pipelines, code standards, and architecture reviews across the mobile team
- Drive complex third-party integrations including Airship, Segment, and analytics infrastructure
- Partner with product, design, and backend leads to shape roadmap feasibility and technical priorities
- Mentor engineers on architecture, BLoC state management, and code quality, raising team output and consistency

Lead Flutter Engineer at Ignite Tournaments, Remote (U.S.-Based)

Sept 2021 — Aug 2025

- Led the full redesign and modernization of a crypto-enabled eSports platform, improving app performance by 20% and reducing regressions by 90% across mobile and web
- Architected a modular Flutter codebase following Clean Architecture principles, enabling the team to scale features without breaking existing functionality
- Directed a remote, cross-functional team of engineers, establishing coding standards, architecture guidelines, and testing practices
- Implemented automated CI/CD pipelines, reducing deployment time by 30% and increasing release reliability
- Designed and maintained backend services using NestJS, integrating mobile and web clients with payment and blockchain systems
- Authored internal documentation for testing, architecture, and code reviews, cutting onboarding time for new engineers
